

Call for Papers for Special Issue-2014

Title: Emerging approaches in Biomedical and Immunotherapeutic Sciences

AIMS & SCOPE

The developments in various branches of sciences are taking place at a very rapid pace. It is now realized by the researchers that only little could be achieved by working into isolation in traditional subjects. Hence, Biomedical has emerged as an interdisciplinary area leading research in Immunology, Medical Microbiology, Molecular Medicine, and other therapeutic Sciences. This integration holds the promise of understanding the strategies of battle between disease and mankind as well as drug innovations from synthetic and natural sources.

The present special issue is intended to bring together basic and clinical updates of Biomedical and Immunotherapeutic research at one platform. The issue will provide an opportunity to reveal the in-depth research on pathogenesis of various human illnesses and recommendations on developing improved immunotherapeutic strategies before the world. Distinguished researchers from across the world are expected to share their researches on various related topics.

Thrust areas of the special issue are:

- A. Immunomodulating approaches against the
 - 1. Cancer
 - 2. Respiratory Diseases
 - 3. Diabetes
 - 4. Liver Diseases
 - 5. Neurological Disorders
 - 6. Gastrointestinal Disorders
- B. Other Infectious diseases causing higher rate of mortality and morbidity in the world

GUEST EDITOR

Dr. Lavkush Dwivedi, PhD

Institute of Biomedical Sciences,
Bundelkhand University, Jhansi-284128 (UP), India
